The ultimate **DEEP GLOSS** protection

PERMAGARD, is the ultimate process for protecting paint and gel surfaces using advanced 'reactive polymer' technology, the most effective and durable coating system available on the market today.

Why should I Permagard my Car I wax and polish it regularly, what do I need Permagard for?

Then our advice to you is STOP! Unless you are extremely careful, you probably do more damage to your paint by regular waxing than not.

Permagard's revolutionary treatment, applied by professionally trained technicians to painted surfaces provides the ultimate safeguard, allowing you to relax and enjoy your valuable asset. With Permagard's exclusive reactive polymer film permanently bonded to your paintwork, you not only have the best protection technology commercially available, you also benefit from an unrivalled depth of colour and gloss that you've never likely experienced before.

Save the time and effort of constantly re-waxing or polishing your car. Get it Permagarded on day one and spend your time enjoying driving it, not polishing it! Permagard's reactive polymer film coating continually protects against constant corrosive attack from tree sap, bird dropping, acid rain, salt, and harsh UV light that cause paints to fade oxidise and crack.

PERMAGARD'S reactive polymer technology is trusted to protect some of the world's most expensive painted surfaces & gel-coats which are subjected to the harshest of climates & environments.

The PERMAGARD process for protecting paint & gel coat surfaces was developed in Monaco and the South of France & was specifically designed to protect high value assets within the automotive, aviation and marine markets.

PERMAGARD'S products are now being used globally in the most challenging of climates. From the freezing temperatures of the Scandinavian fiords to the damaging ultraviolet rays & heat in Australia... PERMAGARD leads the way in durability and protection.
